PROFESSIONAL SUMMARY

Software Engineer with experience in Python, Java, and C/C++, specializing in system architecture, API design, and web services. Proficient in SQL database management and Git version control. Skilled in machine learning, deep learning, and neural network configuration, with hands-on experience in training AI models and developing AI-driven applications. A person who is passionate about technology and is a trustworthy member to collaborate on at work.

EDUCATION

Bachelor of Information Technology: Artificial Intelligence, 11/2019 - 08/2024

FPT University - Ho Chi Minh City, Vietnam

- Graduated with honors, earning a GPA of 3.38.
- Finalist in the FPT Resfes 2023 Scientific Research Competition.

SKILLS

- | | |
|-------------------|---------------|
| • Python | • MySQL |
| • Java | • Mule ESB |
| • C/C++ | • RESTful API |
| • Oracle Database | • RAML |

WORK HISTORY

Software engineer, MuleSoft, 10/2024 - 03/2025

FPT Software - Can Tho, Ninh Kieu

- Enhanced application scalability by **designing** robust software architecture in **Mule ESB**.
- Built and integrated warehouse management application with databases, cloud, and web services, receiving 86% rating for practical implementation.
- Developed automation scripts to minimize manual intervention in routine tasks.
- **GitHub:** <https://github.com/TranDuyNgocBao/API-Storage-Mangement.git>

Personal Project, 09/2023 - 03/2024

FPT University - Ho Chi Minh, Thu Duc

- Led the development of models to **enhance resolution** and **improve color** in **underwater photography**.
- Achieved 4× resolution upscaling, 85% sharper details, and color correction while maintaining fidelity on images.
- **GitHub:** https://github.com/TranDuyNgocBao/Graduation_thesis.git

Personal Project, 03/2023 - 06/2023

FPT University - Ho Chi Minh, Thu Duc

- Led the development of a model to **recognize** blurred or out-of-focus **license plates**.
- Achieved 90% accuracy with real-time processing at ~50 FPS video.

- **GitHub:** https://github.com/TranDuyNgocBao/GAN_ImageSuperResolution.git

AI engineer, 08/2022 - 02/2023

Gradients Technologies - Ho Chi Minh, Tan Phu

- Researched and developed an **image-based model** for recognizing **clothing segmentation**.
- Achieved 90% accuracy in detecting upper body, lower body, and accessories within 384px–768px images.
- **GitHub:** https://github.com/TranDuyNgocBao/Clothing_segmentation.git

CERTIFICATIONS AND LICENSES

- Natural Language Processing, DeepLearning.AI, Aug 2023
- Google Project Management, Google, Jul 2023
- Big Data, University of California, Mar 2023
- Academic English: Writing, University of California, Oct 2022
- Machine Learning, Stanford Online, Jul 2022
- AI Foundations for Everyone, IBM, Mar 2022
- Python for Everybody, University of Michigan, Dec 2021
- Computer Communications, University of Colorado, Jun 2021
